Bram van Wersch

Date of birth: 04-09-1996
Country of birth: Netherlands
Address: Hoevestein 239 12B6
6708 AK Wageningen, Netherlands

Email: bramvanwersch@live.nl
Website: bramvanwersch.github.io
Github: github.com/bramvanwersch

PROFILE

I am a problem solving Bioinformatics student, with 2 years of algorithm/software development experience in various languages. I have contributed to a number of Bioinformatics tools that are currently used. I am looking for a place where I can use and expand my biological and informatics knowledge.

JOB EXPERIENCE

- Post Service: Postal worker delivering mail
  September 2016 to March 2017
- Kruidvat: Order picking
  March 2018 to May 2018
- Gardening: Garden maintenance
  May 2018 to September 2018
- Student assistant: For Algorithms in Bioinformatics at WUR
  May 2021 to July 2021

EDUCATION

- **Bsc. Plant sciences**
  Wageningen University
  Thesis: "Plannotator a pipeline for annotating copy number variants" - annotating copy number variants with GO-terms and visualising the results. Finished with a 7.5.
  Important courses: Programming in Python, Software Engeneering, Advanced Statistics
  September-2019
- **Msc. Bioinformatics**
  Wageningen University
  First thesis: "MultiCblaster: combining MultiGeneBlast and Cblaster" - Combining 2 tools for blasting of gene clusters. Finished with a 7.5
  Second thesis: "Prediction in pangenome graphs" - Using machine learning to predict GO-terms in pangenomes. Grade to be determined
  Important courses: Algorithms in Bioinformatics, Molecular Systems Biology, Machine Learning, Modern Statistics for the Life Sciences, data driven discovery of omics data.
  06-October-2021

SKILLS

- Using Unix/Linux systems
- Strong coding skill in the following programming languages: Python, Java, R, C, C++ and Bash.
- Using and applying machine learning methods.
- Proficiency using various statistical methods and tests.
- Working with databases and MySQL.
- Using various Bioinformatics algorithms to investigate gene functionality.
- Using nextflow for pipeline development.
- Well spoken and written in Dutch and English.

PROJECTS

- **Evolution-Simulator**
  [github.com/bvw/Evolution-Simulator]
  An implementation of simulated evolution with a visual component to it.
  Java, Python
- **MachineMining**
  [github.com/bvw/MachineMining]
  A resource gathering game build using pygame
  Python, R

OTHER HIGHLIGHTS

- Assisted with the development of Cblaster for which the official paper will be published in the near future. The pre-print can be found at https://doi.org/10.1101/2020.11.08.370601
- Contributed to antiSMASH were I helped with writing tests. This will be included in the antiSMASH version 7 at the end of 2021.

HOBBIES & INTERESTS

- Developing games and simulation programs.
- Going for a walk, if possible in the mountains.
- Reading a good book.
